### **Vintner Advantage Software now offers “WORK FLOW TASK MANAGEMENT” Complete Winery Software Solution Provides Customers with Enhanced Efficiencies**

**For Immediate Release--SAN RAMON, CA – January 15<sup>th</sup>, 2010**

Modular Information Systems, [www.modularinfosystems.com](http://www.modularinfosystems.com), with an established track record in Winery Management Software innovation has added a new “task management” enhancement to its customizable and scalable winery and grower-specific software suite.

Work Flow Task Management is now available in all Vintners Advantage Software Modules. This new feature allows for automatic software task scheduling, task approvals and reminders. Task routing is also included, so that tasks continue to escalate through the approval 'chain of command.'

A task inbox shows what tasks are scheduled for today, or are pending for future review. Task inboxes may be setup for job functions instead of individuals, providing greater task visibility across the organization.

Work Flow Task Management allows the work order and winery operations functions for Vintners Advantage to be even more powerful throughout the winery organization. The software reminds the user of important job functions.

“We have a solid and dedicated customer-base who relies on our expertise and support. The workflow enhancement provides significant value by allowing our Winemakers to actually track their operational tasks. It’s a wonderful feature that provides cost-effective efficiencies,” comments Lisa Levsen, President, Modular Information Systems.

For the past twenty-four years, the Modular Information Systems has built its reputation on reliability and integrity. The company’s flagship software product, VINTNERS ADVANTAGE, has been a significant player in servicing the needs of international winemakers from the Vineyard through Point of Sale. The integrated software has hundreds of committed users—from “grape to glass.”
